## A-Level MATHEMATICS TRANSITION WORK

If you are intending to study Core Maths, rather than A-Level Maths, please complete the summer homework for that course.

## Please note:

- The questions will be taken in and marked - and you will be expected to write up your solutions clearly and neatly. You may explore the questions in rough but then write up your working and answers neatly on A4 paper with each question clearly labelled. Try to use mathematical notation where you can.
- You should not use a calculator on section A, please show enough working so that we can see where your answers came from.
- We would encourage you to try these questions on your own but if you do collaborate with another student or use the internet to find formulae etc. please say so on your solution sheet.
- Section A questions are quite like GCSE questions and are designed to show how ready you are to start the course. If you are struggling with these questions then you need to do some extra study! (Contact dheller@kes.sheffield.sch.uk for info on where to find resources)
- Section B are 'Pure maths' questions, but set in context. They test your ability to translate a real world problem into mathematical language and use trigonometry and quadratics to solve it.
- Solutions should be handed into your class teacher in your first lesson. We hope you find the questions challenging but enjoyable!
- Students intending to study Further Mathematics should also attempt the extension question of Section B.

King Edward VII Mathematics Department

Transition Work Summer 2023. Please return to your maths teacher(s) in September!

## SECTION A: GCSE STYLE QUESTIONS [Non- Calculator]

1. Mandy is $x$ years old.

Her brother is 5 years older than Mandy. The product of their ages is 84 .
(a) Show that

$$
\begin{equation*}
x^{2}+5 x-84=0 \tag{1}
\end{equation*}
$$

(b) Solve $x^{2}+5 x-84=0$

Do not use a trial and improvement method.
(c) How old is Mandy
2. The diagram shows the graph of $y=2 x+1$.

A line passes through the point $(2,-3)$ and is perpendicular to $y=2 x+1$.
The equation of this line can be written in the from $\mathrm{ax}+\mathrm{by}=\mathrm{c}$.
What are the values of $a, b$ and $c$ ?
3. (a) (i) Find the value of $x$ in $4^{x}=\frac{1}{16}$
(ii) Find the value of $y$ in $8^{y}=2$
(b) What is the value of $27^{\frac{2}{3}}$
4. (a) Simplify fully the expression

$$
\begin{equation*}
\frac{8 x^{2}+24 x}{2 x^{2}+5 x-3} \tag{3}
\end{equation*}
$$

(b) You are given that $(x+a)^{2}+b=x^{2}+6 x+13$. Find the values of $a$ and $b$.
5. (a) List the integer values of $x$ such that

$$
\begin{equation*}
-2 \leq x<3 \tag{2}
\end{equation*}
$$

(b) Solve the inequality

$$
\begin{equation*}
x^{2}>64 \tag{2}
\end{equation*}
$$

6. (a) You are given the formula $y=\frac{5+x}{x}$ Rearrange the formula to give $x$ in terms of $y$.
(b) Simplify $\left(3 x y^{2}\right)^{4}$.
7. Solve the simultaneous equations

$$
\begin{gathered}
x^{2}+y^{2}=24 \\
y=6-x
\end{gathered}
$$

Give your answers in the form $\mathrm{a}+\mathrm{Vb}$

## SECTION B: THE FARMER'S FIELD

A farmer has a barn and some sheep. He wishes to make an enclosure for his sheep from the 36 m of fencing that he has. He wants to make the area as large as possible.

(a) Complete the table to show the areas that can be made with particular dimensions

| Width | 0 | 2 | 4 | 6 | 8 | 10 | 12 | 14 | 16 | 18 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Length |  | 32 m |  |  |  | 16 m |  |  |  |  |
| Area |  |  | $112 \mathrm{~m}^{2}$ |  |  |  |  |  |  |  |

(b) Draw a graph to show these results - plot width on the $x$ axis and area on the $y$ axis
(c) What is the formula which links Area and width?
(d) What is the maximum area that the farmer can enclose with 36 m of fencing?

What width of fence gives this area?
(Extension: Can you verify that this is the maximum area using algebra and/or calculus?)
(e) Now, Mr Farmer is a bit mathematical and begins to wonder about different shaped enclosures that can be made with his 36 m of fencing. He starts with a square:

What would the area be?
Remember that the fence only needs to have 3 sides as the barn will make the fourth side.
(f) Then he moves onto a pentagon shaped enclosure - again he has 36 m of fencing.

What would the area be?
Remember that the fence only needs to have 4 sides as the barn will make the fifth side.
(g) Next he moves onto a hexagonal shaped enclosure - again he has 36 m of fencing.

What would the area be?

## EXTENSION...

Then he wonders if he could find a general formula to help him work out the area for a regular enclosure of $n$ sides.... What would it be?

Transition Work Summer 2023. Please return to your maths teacher(s) in September!
